340B Drug Pricing Program

Description: This 340B Drug Pricing Program data set includes detail and summary information by location, entity type (i.e., HRSA-supported health centers and look-alikes, Ryan White clinics and State AIDS Drug Assistance programs, Medicare/Medicaid Disproportionate Share Hospitals, children's hospitals, and other safety net providers), Health Professional Shortage Area (HPSA) status for the covered entities as of the date of extract. The 340B Drug Pricing Program requires drug manufacturers to provide outpatient drugs to eligible health care organizations/covered entities at significantly reduced prices. The 340B Program enables covered entities to stretch scarce Federal resources as far as possible, reaching more eligible patients and providing more comprehensive services.

Purpose: This data set was compiled to increase transparency into the 340B Drug Pricing Program and to make available summary information concerning the health care organizations (also known as covered entities) eligible for discounted drug pricing under Section 340B of the Public Health Service Act (1992) free to the public via the HRSA Data Warehouse charting applications.

American Community Survey (ACS)

Description: This dataset consists of U.S. population statistics compiled by the U.S. Census Bureau during the decennial censuses of 2000 and 2010 and American Community Survey (ACS) 5 years data for 2006-2010, 2007-2011, 2008-2012, 2009-2013, 2010-2014, and 2011-2015. This data provides population counts, housing characteristics, and income and poverty information for the major age, racial, and ethnic groups. The information covers the 50 States, the District of Columbia, and the U.S. territory Puerto Rico. Data are available in a hierarchical sequence of summary levels down to the census tract for many of the tabulations (where available). Data are summarized at one or more of the following geographic levels: State / State Equivalent; County / County Equivalent; Census Tract; County Subdivision (Minor Civil Division, Census County Division, Township, Borough, Subbarrio as appropriate); Metropolitan Statistical Area; and Congressional District.

Purpose: This dataset was assembled and included in the HRSA Data Warehouse (HDW) in order to provide context for HRSA activities, and to provide input data for the analytical responsibilities of HRSA.

Area Health Education Centers (AHECs) - Programs and Centers

Description: The Area Health Education Centers (AHEC) Program enhances access to high quality, culturally competent health care through academic-community partnerships to ultimately improve the distribution, diversity, and supply of the primary care health professions workforce who serve in rural and underserved health care delivery sites. The AHEC Program awardees subcontract with community-based AHEC centers in one or more regions of a state. Along with state and local partners, the AHEC programs and centers: (a) Recruit and train students from minority and disadvantaged backgrounds into health careers; (b) Place health professions students in community-based clinical practice settings - with a focus on primary care; (c) Promote inter-professional education and collaborative teams to improve quality of care; and (d) Facilitate continuing education resources and programs for health professionals - particularly in rural and underserved areas.

Purpose: The purpose of the Area Health Education Center (AHEC) data set is to increase the transparency the AHEC program support of health careers by making information about the infrastructure development and point of service maintenance and enhancement grants and the supported by HRSA grants available to the public.

Area Health Resources Files (AHRF)

Description: The Area Health Resources Files (AHRF) data are designed to be used by planners, policymakers, researchers, and others interested in the nation's health care delivery system and factors that may impact health status and health care in the United States. The AHRF data includes county, state, and national-level files in eight broad areas: Health Care Professions, Health Facilities, Population Characteristics, Economics, Health Professions Training, Hospital Utilization, Hospital Expenditures, and Environment. The AHRF data are obtained from more than 50 sources. The AHRF has county, state, and national level files from the HRSA, Bureau of Health Workforce (BHW) available for download.

Purpose: The purpose of the Area Health Resources Files (AHRF) data set is to provide a broad perspective on the health resources available from a state and national perspective.

Update Frequency: Annually

Usage Limitations: Please refer to the following webpage: <http://www.hhs.gov/Disclaimer.html>. To learn more, visit the Area Health Resources Files (AHRF) website: <http://ahrf.hrsa.gov/>. Centers for Medicare & Medicaid Services (CMS)

Description: This is the "Provider of Service" extract from the Quality Improvement Evaluation System (QIES) database maintained by the Centers for Medicare & Medicaid Services (CMS). These data include provider number, name, and address and characterize the participating institutional provider (including hospitals, skilled nursing facilities, home health agencies, and other types of facilities). The data are collected through the CMS Regional Offices. The file contains an individual record for each Medicare-approved provider and is updated quarterly.

Purpose: The CMS "Provider of Service" data are included in the HRSA Data Warehouse because this is the most readily-obtainable data on various classes of health care facilities, such as hospitals, hospices, rural health clinics, and Federally-Qualified Health Center Look-Alikes, all of which are of interest to HRSA.

Update Frequency: Quarterly

Data Sources

Centers for Medicare & Medicaid Services (CMS), Healthcare Cost Report Information System (HCRIS)

Description: Increasing opportunities for residents to train in rural communities is one approach to addressing physician shortages in rural communities. Studies have shown that residents trained in rural settings are more likely to continue practicing in rural settings. However, residency programs are challenging to sustain in rural communities. To accommodate these challenges, Medicare has regulatory provisions that better enable rural Prospective Payment System (PPS) hospitals that have never previously trained residents to qualify for Medicare Graduate Medical Education payments.

Purpose: The HRSA, Federal Office of Rural Health Policy (FORHP) has determined a means of determining whether rural PPS hospitals have not previously incurred residency training costs using Centers for Medicare & Medicaid Services (CMS) cost report data. Due to the cumbersome method required to extract the relevant information from the CMS cost reports, FORHP tasked the HRSA Data Warehouse with developing a process to assemble and analyze the data for potential grantee applicants to quickly and easily determine whether hospitals had incurred training costs and were rurally located. This will improve efficiency for HRSA staff and rural hospitals, State Offices of Rural Health, Primary Care Organizations, and other stakeholders interested in expanding rural graduate medical education to reduce physician shortages in rural areas.

Update Frequency: Quarterly

Usage Limitations: Please refer to <http://www.hhs.gov/Disclaimer.html> for HRSA website disclaimer. Refer to the Centers for Medicare & Medicaid Services (CMS) website for more information about the CMS cost reports at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/Cost-Reports/>.

Congressional Representatives and Senators

Description: This data mart consists of information identifying Members of the U.S. House of Representatives and Members of the U.S. Senate and associated geographic boundary for accurate association of HRSA data to the representative districts. The U.S. Congress is the bicameral legislature of the U.S. federal government consisting of chambers the U.S. Senate and the U.S. House of Representatives. The House data has records for representatives from the 435 congressional districts, 6 for the non-voting delegates, and 4 for the territories that have no representation. The non-voting delegates represent the District of Columbia and the five territories of American Samoa, Guam, Northern Mariana Islands, Puerto Rico (whose delegate is called Resident Commissioner), and U.S. Virgin Islands. The territories with no representation are Federated States of Micronesia, Marshall Islands, Republic of Palau, and U.S. Minor Islands. The Senate data has the 100 senators, 2 for each state.

Purpose: This data is made available to ensure that HRSA Data Warehouse (HDW) products accurately portray the status of the U.S. House of Representatives and U.S. Senate legislative districts. The data is accurate at the time of publication.

Health Center Controlled Network

Description: Health Center Controlled Networks (HCCN) are networks of safety net providers who ensure access to health care for the medically underserved populations through the enhancement of health center operations, including health information technology. Within the networks, individual health centers work together to share resources, leverage buying power (e.g., discounted software), enhance access to information and promote guidelines on best practices, as well as provide support for achieving quality of care and operational goals. Networks support member health centers in their shared mission to provide comprehensive, culturally competent, quality primary health care services to medically underserved communities and vulnerable populations.

Purpose: This data set was compiled to increase transparency into the Health Center Controlled Network (HCCN) grant program and active grantees. The data set provides contact information to the public or organizations interested in joining a network, or finding out more about a particular Electronic Health Record (EHR)/Practice Management System (PMS) vendor or software product.

Update Frequency: Daily

Usage Limitations: Please refer to <http://www.hhs.gov/Disclaimer.html> for HRSA website disclaimer and Learn more about the program by visiting the HRSA HCCN Web page at <http://www.hrsa.gov/healthit/toolbox/HealthITAdoptiontoolbox/OpportunitiesCollaboration/controlnetworks.html>.

Health Professional Shortage Area (HPSA)

Description: The Division of Policy and Shortage Designation (DPSD) in the HRSA, Bureau of Health Workforce (BHW) develops shortage designation criteria and uses them to decide whether or not a geographic area or population group is a Health Professional Shortage Area (HPSA), Medically Underserved Area (MUA), or Medically Underserved Population (MUP). More than 34 federal programs depend on the shortage designation to determine eligibility or as a funding preference. About 20 percent of the U.S. population resides in primary medical care HPSAs. HPSAs may have shortages of primary medical care, dental, or mental health providers; may be urban or rural areas; population groups; or medical or other public facilities.

Purpose: The purpose of the Health Professional Shortage Area (HPSA) data set is to increase transparency into the HRSA shortage designation processes and identify the areas of health professional shortage in the U.S. by making the detailed HPSA information available free to the public.

HRSA Health Center Service Delivery Sites

Description:	For more than 40 years, Health Resources and Services Administration (HRSA)-supported health centers have provided comprehensive, culturally competent, quality primary health care services to medically underserved communities and vulnerable populations. Health centers are community-based and consumer-run organizations that serve populations with limited access to health care. These include low income populations, the uninsured, those with limited English proficiency, migrant and seasonal farm workers, individuals and families experiencing homelessness, and those living in public housing. For information about the HRSA Health Centers program please refer to the following webpage: http://bphc.hrsa.gov/about/ .
Purpose:	The purpose of the HRSA Health Center Service Delivery Sites data set is to increase the transparency the HRSA Health Center Cluster grant program by making information about the health centers supported by HRSA grants and health center look-alikes available to the public.

Insure Kids Now

Description: The Insure Kids Now (IKN) data mart was created in 2009 to support the Congressional mandate that the Centers for Medicaid and Medicare Services (CMS) assemble, post, and maintain a list of all dental care providers in the United States who accept patients insured under either Medicaid or the Children's Health Insurance Program (CHIP). CMS is required to maintain the list with updates posted no less frequently than quarterly.

Purpose: The Insure Kids Now (IKN) data mart supports the website and tool operated by the Centers for Medicare & Medicaid Services, provides information about Medicaid and the Children's Health Insurance Program (CHIP) for: (1) families seeking health insurance coverage for children and teens and families needing help locating a dentist and (2) organizations interested in getting involved in the Connecting Kids to Coverage National Campaign, a national outreach and enrollment initiative initially funded under the Children's Health Insurance Program Reauthorization Act (CHIPRA) and the Affordable Care Act, and now through the Medicare Access and CHIP Reauthorization Act (MACRA).

Maternal and Child Health Workforce Development

Description: The HRSA, Maternal and Child Health Bureau (MCH), Division of MCH Workforce Development (DMCHWD) provides national leadership and direction in educating and training the future leaders of the nation in maternal and child health. Special emphasis is placed on the development and implementation of interprofessional, family-centered, community-based and culturally competent systems of care across the entire life course with experiences in one life stage shaping health in later stages. In partnership with state Maternal and Child Health programs, academic institutions, and professional organizations, the Division collaborates with other health training programs of the federal government to ensure that Maternal and Child Health initiatives are based on emerging and evidence-based practices.

Purpose: The purpose of the Maternal and Child Health Workforce Development data set is to standardize and summarize the program information to support charts which program is presenting to represent the impact of the program across the nation.

Medically Underserved Area (MUA) or Medically Underserved Population (MUP)

Description: Medically Underserved Areas (MUA) may be a whole county or a group of contiguous counties, a group of county or civil divisions or a group of urban census tracts in which residents have a shortage of personal health services. Medically Underserved Populations (MUPs) may include groups of persons who face economic, cultural or linguistic barriers to health care. The Shortage Designation Branch in the HRSA Bureau of Health Professions National Center for Health Workforce Analysis develops shortage designation criteria and uses them to decide whether or not a geographic area or population group is a Medically Underserved Area or Population.

Purpose: The purpose of the Medically Underserved Area/Population (MUA/P) data set is to increase transparency into the HRSA shortage designation processes and identify the areas of health professional shortage in the U.S. by making the detailed MUA/P information available free to the public.

Migrant & Seasonal Head Start (MSHS)

Description: Migrant & Seasonal Head Start (MSHS) is a federally funded program which provides comprehensive Head Start services, including child development/school readiness, social and health (including nutrition, oral health and mental wellness) services to low income families working in agriculture, or families who migrate for the purpose of working in agriculture. The data includes the names, addresses, and season/service hours for the MSHS centers and is served to the public via the HRSA Data Warehouse Find a Migrant and Seasonal Head Start Center locator tool.

Purpose: The HRSA, Office of Special Population Health (OSPH) shares many priorities with the migrant and seasonal farm workers populations, including, but not limited to, increasing access to primary health care services for migrant and seasonal farm worker families, and, particularly, dental services for migrant children; reducing the burden of disease on the migrant and seasonal farm worker population; increasing health professional workforce development; increasing health information technology investments in migrant health center facilities; and improving access to funding and grant opportunities.

National Health Service Corps (NHSC) Program Award Statistics

Description:	This dataset consists of count and amount summary information on National Health Service Corps (NHSC) Scholars, NHSC Loan Repayment award recipients, and NHSC Students to Service. NHSC clinicians are part of a unique and nationally recognized family of clinicians that share a strong personal commitment to improving the health of the neediest communities in the U.S. NHSC clinicians practice community-based health care and treat the whole patient through health promotion, disease prevention, and continuity of care. They are a dedicated interdisciplinary team of caring health professionals: certified nurse-midwives, clinical or counseling psychologist, clinical social worker, dental hygienist, dentists, licensed professional counselor, marriage and family therapist, nurse practitioners, physician assistants, primary care physicians, and psychiatric nurse specialist. They provide culturally sensitive care in a wide range of settings-at community and migrant health centers, health care for the homeless clinics, and other public and private primary care delivery sites-in inner-city and rural communities nationwide.
Purpose:	The purpose of the National Health Service Corps (NHSC) Participant Statistics dataset is to provide geographic summary information of count and amount of NHSC awards by year and program for the fact sheets (summary data about HRSA activities in each congressional district, county, state, HHS region, and nationwide.)

National Practitioner Data Bank Data (NPDB)

Description:	The National Practitioner Data Bank (NPDB) routinely collects information relating to medical malpractice payments and certain adverse actions taken against practitioners' licenses, clinical privileges, professional society memberships, and eligibility to participate in Medicare/Medicaid. NPDB data reflect medical malpractice payment and adverse action information submitted to the data bank by medical malpractice payers and insurers, state licensing boards, hospitals, professional societies, private accreditation entities, peer review organizations, and other health care organizations. Additionally, the Drug Enforcement Administration reports adverse actions taken against its licensees and the U.S. Department of Health and Human Services' Office of Inspector General reports all settled or adjudicated Medicare and Medicaid medical malpractice cases to the NPDB.
Purpose:	The purpose of the National Practitioner Data Bank (NPDB) data set is to improve health care quality, protecting the public, and reducing health care fraud and abuse in the U.S. via increased data transparency by making the NPDB professional credentials of health care practitioners, health care entities, providers, and suppliers summary information available to the public.

National Sample Survey of Registered Nurses (NSSRN)

Description: The Survey has been conducted approximately every four years since 1977. For each survey year, HRSA has prepared two Public Use File databases in flat ASCII file format, without delimiters. General Public Use Files are State-based and provide information on nurses without identifying the County and Metropolitan Area in which they live or work. County Public Use Files provide most, but not all, the same information on the nurse from the General Public Use File, and also identifies the County and Metropolitan Areas in which the nurses live or work. Information likely to point to an individual in a sparsely-populated county has been withheld. NSSRN data are to be used for research purposes only and may not be used in any manner to identify individual respondents. For more information about the survey please refer to <http://bhpr.hrsa.gov/healthworkforce/supplydemand/nursing/>.

Purpose: The NSSRN data have been included in the HRSA Data Warehouse in order to provide a convenient online distribution medium for the data, to those researchers and analysts who are interested in obtaining it.

NURSE Corps Program (NCP)

Description: This data mart contains information on active participants in the NURSE Corps Scholarship Program (NCSP) and NURSE Corps Loan Repayor Program (NCLRP). Millions of Americans do not have access to health care because they live where there are not enough health professionals to meet basic needs. Shortages of health professionals suggest many more may soon find themselves unable to see a primary health care provider when they need one. HRSA scholarship and loan programs help to encourage and enable clinicians to work in underserved areas. Participants in the NCSP, also referred to as scholars, are either in school or serving in the field and participants in the NCLRP program, also referred to as loan repayors, are serving in the field. When serving the scholars and loan repayors are fulfilling their service requirement at facilities which are located in shortage areas.

Purpose: This dataset was assembled and included in the HRSA Data Warehouse (HDW) in order to provide context for current HRSA activities with regard to nursing scholarships and loans, and to provide data supporting the analytical responsibilities of HRSA. The HDW provides free data and tools to the public which allow users to interact with data in charts, tables/reports, maps, and tools.

Operation and Performance of Health Centers (OPHC)

Description:	The Uniform Data System (UDS) is a core set of information appropriate for reviewing the operation and performance of health centers. The data are collected and reviewed annually to ensure compliance with legislative and regulatory requirements, improve health center performance and operations, and report overall program accomplishments. UDS data help to identify trends over time, enabling HRSA to establish or expand targeted programs and identify effective services and interventions to improve the health of underserved communities and vulnerable populations. These data are compared with national data to review differences between the U.S. population at large and those individuals and families who rely on the health care safety net for primary care.
Purpose:	This data set was compiled to increase transparency into the HRSA health center grant program. The data set makes performance measures available to the public or organizations interested in finding out more information concerning the health care safety net for primary care in another format.
Update Frequency:	Annually
Usage Limitations:	Please refer to http://www.hhs.gov/Disclaimer.html for HRSA website disclaimer. The Uniform Data System (UDS) data are compiled and measures are routinely reported to health centers through the Electronic Handbook (EHB) and to the public through the bureau website http://bphc.hrsa.gov/uds/datacenter.aspx .

Data Sources

Organ Donation and Transplantation

Description: This data mart consists of state level Organ Procurement Organizations (OPO) and their associated Organ Transplantation Centers (OTC). This data comes from the Organ Procurement and Transplantation Network (OPTN). The OPTN is a unified transplant network established by the U.S. Congress under the National Organ Transplant Act (NOTA) of 1984 and is operated by a private, non-profit organization under federal contract.

Purpose: This dataset contains high level information regarding the individual state Organ Procurement Organizations (OPO) and their associated Organ Transplantation Centers (OTC). For each organization and transplantation center this data includes center name, address, and indication of which organs the center transplants. HRSA provides this data to increase the transparency and add context for the HRSA organ donation and transplantation grant programs by making this information available to the public.

Update Frequency: Semi-annually

Usage Limitations: For more information about the HRSA, Healthcare Systems Bureau (HSB), Division of Transplantation please refer to <http://www.hrsa.gov/about/organization/bureaus/hsb/>; for more information about the Organ Procurement and Transplantation Network (OPTN), please refer to <https://optn.transplant.hrsa.gov/>; for more information about the United Network for Organ Sharing (UNOS), please refer to <https://www.unos.org/about/>; and for information about the HRSA disclaimer, please refer to <http://www.hhs.gov/Disclaimer.html>.

Data Sources

Organ Procurement Organization (OPO) State Registries

Description: There are 58 Organ Procurement Organizations (OPOs) in the U.S. OPOs are responsible for two main functions within their designated service area: 1) increasing the number of registered donors, and 2) coordinating the donation process when actual donors become available. To increase donor sign-up, OPOs may implement any number of community outreach activities such as sponsoring advertising campaigns, programs in schools, worksites, or faith institutions and making print and electronic materials available.

Purpose: This dataset was created to increase facilitate electronic dissemination of the most up-to-date state registry website addresses for the HRSA, Healthcare Systems Bureau (HSB), Division of Transplantation.

Update Frequency: Monthly

Usage Limitations: For more information about the HRSA, Healthcare Systems Bureau (HSB), Division of Transplantation please refer to <http://www.hrsa.gov/about/organization/bureaus/hsb/> and for information about the HRSA disclaimer, please refer to <http://www.hhs.gov/Disclaimer.html>.

Data Sources

Primary Care Service Area

Description: The Primary Care Service Area (PCSA) data mart contains nationwide data of interest to health policy makers and researchers about United States primary health care resources, populations, and utilization, compiled and presented in newly revised units of analysis (PCSA, version 3.1) and related to other geopolitical regions such as census tracts.

Purpose: The goal of the Primary Care Service Area (PCSA) Project is to provide information about primary care resources and populations within small standardized areas that reflect patient utilization patterns, based on Medicare utilization data. The first version of the PCSAs was developed by aggregating 1990 U.S. Postal Service (USPS) Zone Improvement Plan (ZIP) codes into PCSAs (Goodman, et al., Health Services Research, 2003, Vol. 38, pp 287-309). The second version of the PCSAs (2.1) used more recent (1999 Medicare and 2000 Census) data, and was developed by aggregating 2000 Census ZIP-code tabulation areas (ZCTAs) (<http://www.census.gov/geo/reference/zctas.html>). The current, third version of the PCSAs (3.1) was developed using 2009 Medicare utilization data and by aggregating groups of 2010 census tracts. The definition of PCSA boundaries and the description of these areas are contained within a database linked to an Internet-based geographic information system (GIS) to allow federal, state, and academic users easy access.

Update Frequency: As Required

Usage Limitations: (1) Only selected Primary Care Service Area (PCSA) attributes and HRSA Data Warehouse (HDW) specially computed PCSA attributes are available via the HDW tools. However, all PCSA attributes and information are available for download via the HDW. (2) Please refer to the following web page <http://www.hhs.gov/Disclaimer.html> for the U.S. Department of Health and Human Services (HHS) website disclaimer.

Data Sources

Rural Areas

Description: The Rural Areas are spatially-enabled data available in the HRSA Data Warehouse (HDW). This data set is the collection of U.S. Census -defined geographies which are identified as rural.

There are two major definitions which the Federal government uses to identify the rural status of an area. The first is from the U.S. Census Bureau which identifies two types of urban areas, Urbanized Areas (UAs) of 50,000 or more people and Urban Clusters (UCs) of at least 2,500 and less than 50,000 people. Since the U.S. Census Bureau does not explicitly classify areas as rural, rural is defined as" encompassing all population, housing, and territory not included within an urban area (those areas not identified as UC or UA). In the 2010 Census 19.3% of the population was rural while over 95% of the land area is still classified as rural. The second is from the Office of Management and Budget (OMB) which designates counties as Metropolitan, Micropolitan, or Neither. An OMB Metropolitan area contains a core urban area of 50,000 or more population, and a Micropolitan area contains an urban core of at least 10,000 (but less than 50,000) population. All counties that are not part of a Metropolitan Statistical Area (MSA) are considered rural.

There are measurement challenges with both the U.S. Census Bureau and OMB definitions. Some policy experts note that the U.S. Census Bureau definition classifies quite a bit of suburban area as rural. The OMB definition includes rural areas in Metropolitan counties. Consequently, one could argue that the Census Bureau standard includes an over count of rural population whereas the OMB standard represents an undercount of the rural population.

The HRSA, Office of Rural Health Policy (ORHP) accepts all non-metro counties as rural and uses an additional method of determining rural status called the Rural-Urban Commuting Area (RUCA) codes. Like the MSAs, these are based on Census data which is used to assign a code to each Census Tract. Tracts inside Metropolitan counties with the codes 4-10 are considered rural. While use of the RUCA codes has allowed identification of rural census tracts in Metropolitan counties, among the more than 60,000 tracts in the U.S. there are some that are extremely large and where use of RUCA codes alone fails to account for distance to services and sparse population. In response to these concerns, ORHP has designated 132 large area census tracts with RUCA codes 2 or 3 as rural. These tracts are at least 400 square miles in area with a population density of no more than 35 people. The ORHP definition includes about 20% of the population and 91% of the area of the USA. RUCA codes represent the current version of the Goldsmith Modification.

Purpose: The rural areas spatial dataset is assembled to provide supplemental visual and analytical context information for activities related to rural health care in the HRSA Data Warehouse. This data provides much needed information to meet mission goals of specific bureaus, offices, divisions, and branches within HRSA.

Ryan White HIV/AIDS Medical Care Providers

Description: The Ryan White Comprehensive AIDS Resources Emergency (CARE) Act is Federal legislation that addresses the unmet health needs of persons living with HIV disease (PLWH) by funding primary health care and support services that enhance access to and retention in care. The CARE Act was named after Ryan White, an Indiana teenager whose courageous struggle with HIV/AIDS and against AIDS-related discrimination helped educate the nation. Please refer to <http://hab.hrsa.gov/> for more information.

Purpose: The Ryan White HIV/AIDS Medical Care Providers data set, which contains primary medical care and essential support services data, are included in the HRSA Data Warehouse to provide information for users looking for places to obtain assistance and for others interested in grantee information.

Update Frequency: As Required

Usage Limitations: Please refer to the following webpage: <http://www.hhs.gov/Disclaimer.html>.

Ryan White HIV/AIDS Recipient and Sub-Recipient

Description: The Ryan White HIV/AIDS Program provides a comprehensive system of care that includes primary medical care and essential support services to low-income people living with HIV who are uninsured or underinsured. The Program funds grants to cities, states, and local community-based organizations to provide HIV care and treatment services to more than half a million people each year. For more information, visit www.hab.hrsa.gov.

Purpose: This data set was compiled to increase transparency into the Ryan White HIV/AIDS Program by providing information free to the public via the HRSA Data Warehouse data portal, report, mapping, and data download applications.

Update Frequency: As Required

Usage Limitations: The data is accurate at the time of product publication. Please refer to the webpage <https://www.hhs.gov/disclaimer.html> for the HRSA disclaimer.

Spatial Data

Description:	The HRSA Data Warehouse (HDW) contains a variety of "spatially-enabled" data. In addition to the data that originate from HRSA's activities, other parts of the Department of Health and Human Services, and other health-related organizations, the spatial data in the HDW include such things as administrative boundaries, physical features (lakes, rivers, roads, etc.), ZIP code areas, Census-defined geographies, and other items that place HRSA's program data in its physical and social context.
Purpose:	Data needed to process and display HRSA's program data on a map. Some data are used in the HDW data preparation process in order to "spatially enable" tabular data from HRSA's various data sources. Other data are used purely to provide supplemental visual and analytical context in the HDW interactive map tool and web service-based data distribution.

U.S. Census 2010 Redistricting Data

Description: This dataset consists of U.S. population statistics compiled by the U.S. Census Bureau during the decennial census of 2010 and is used to support the redistricting process. This data provides population counts for the major racial and Hispanic status groups. The information covers the 50 States, the District of Columbia, and Puerto Rico. Data are available in a hierarchical sequence of summary levels down to the block group for many of the tabulations (where available).

Data are summarized at one or more of the following geographic levels:

- * ST : State / State equivalent,
- * CO : County / county equivalent,
- * CT : Census Tract,
- * BG : Block Group,
- * MC : County Subdivision (MCD, CCD, Township, Borough, Subbario as appropriate)
- * CD : Congressional District (111th Congress).

Purpose: This dataset was assembled and included in the HRSA Data Warehouse in order to provide context for HRSA's activities, and to provide input data for HRSA's analytical activities.
